

As an amateur operator, it is very disturbing to me to see the FCC supporting the utility companies turning their power transmission lines into antennas. We regularly talk around the world with VERY low levels of energy on the 10 meter band. If BPL becomes reality without very strong regulation, a lot of folks will have their internet services broadcast to the world as well. Please at least consider reasonable and appropriate standards and regulations to ensure the service is a clean one and that other legitimate, authorized, licensed and pre-existing services are not rendered useless. Thank you for the opportunity to comment. Barry Rickett, N2EVS
